

## Fast Glass

The concept:

As opposed to “**Slow Glass**” (slow glass is a transparent substance that slows the speed of light to less than a crawl as it passes through the glass.) “**Fast Glass**” on the other hand crosses vast distances instantaneous by making use of the phenomenon of quantum entanglement to reduce the light travel time to zero as the light emerges on point B the very instant it entered point A. The implications are far reaching.

Allow me to illuminate by way of possible application. Imagine a window pane that shows what was happening outside that very window 300 years ago like a movie on a television. Fast forward to “**Fast Glass**” and see what happened that instant before every one else got to see it because they had to wait to allow for information travel time from minutes to decades. It is clear that such apparatus is very expensive, but the cost would be easily recuperated, say by purchasing stock before anyone else knows it’s just gone up. Or selling stock before anyone else got the message. **Note: this is not illegal!** Similar action is currently undertaken by anyone owning a faster computer on fiberoptic connections, as opposed to a 300 Baud modem that runs the FAX-machine next to your in basket (a crass exaggeration, granted, but it does bring the point home.) The slogan: **Fast Glass will save your Ass** is thus not all together inappropriate.

Use and Abuse:

It seems useful to further explore the abuse of this technology much of which is off course not inexpensive and thus not readily available to the common abuser. None the less, as the technology matures, there will be low cost versions reaching the low end market thereby broadening the spectrum of abuse. Further examples can surely be conjured up: The very concept (above) underscores the fine line between use and abuse as it details one of the obvious uses; surely your imagination can easily conjure up many more, making this product all the more desirable.

Crowdfunding:

As this concept is played against the hurdles of technological abilities still in resolution an opportunity arises to own a piece of the action, our team has decided on an equitable distribution of the fruits of our efforts on a \$ for \$ basis. 49% of the resulting profits will be distributed e.g. transferred to the contributors in direct proportion to their contributions, appropriately prorated over the fiscal period according to the activation time of their contribution into the collective funding pool. This shall be done on an annual bases ending with the fiscal year and be released within 30 days of the fiscal year together with an overview of the progress of activities. Please note: A \$1000.- minimum is required to enter into the process. No guarantees are given or implied. Details about the accounts for participation will be sent to you after your eMail inquiry.
